Bartosz Lemanek
FRONT-END DEVELOPER | REACT

As a passionate frontend developer by vocation, I dedicate myself to creating thoughtful digital experiences. Although my professional experience is still relatively short, my commitment and determination speak for themselves. I have numerous projects listed below and beyond this section, on which I have worked and which attest to my knowledge and skills. I began my journey in May 2023, dedicating 12 to 14 hours daily to learning and development. My knowledge stems from pure hard work and determination, not from academic titles. While I may lack the wealth of professional experience, it is my relentless pursuit of knowledge and success that sets me apart from others.

WORK HISTORY

Independent Front-End Developer
2023-05 - present

React, Gdańsk

I have created numerous projects during this period, but I have highlighted the four most important ones in the **Projects** section, namely:
• Portfolio
• INSIGHT.
• SpeakGPT & FALL-E
• Furniture Haven

In addition, I have many more smaller projects, such as ToDo lists or a Weather App built on the openweather API. These are just two mentioned out of many others.

EDUCATION

Computer Science / Programming, Engineer
2020-10 - 2024-03

WSB Merito University, Gdańsk

SKILLS

■ Responsive design

■ SEO expertise

■ Proficiency in HTML5 and CSS3

■ Good knowledge of JavaScript/TypeScript

■ React, Vite and Vitest

■ Bootstrap and Tailwind CSS

■ Framer motion and GSAP

- SASS / BEM
- Git / Github
- Soft skills
- Gulp
- Graphic editors like Figma, Photoshop and Illustrator
- NPM / NODE.JS
- API Integration
- Driving licence (category B)

LANGUAGES

- English - C1

HOBBY/INTEREST

Every day, I immerse myself in the fascinating world of creativity found in coding and web design. On special occasions, I am a sports enthusiast, working on improving my physical fitness. Meanwhile, in my free time, I occasionally enjoy a board game or video game session, although lately, it has become quite rare as I've shifted my focus from gaming to developing my passions.

PROJECTS

Front-End Developer
2023-12 - 2024-01

Portfolio

The best project I've currently worked on and am most proud of is created with unique animations, coupled with code optimization and refactoring, using a plethora of React libraries and various incredible tools. I've made it using **React, Vite, TypeScript, ESLINT, Framer motion, GSAP, SCSS, TailwindCSS** and many more tools. I'd like to emphasize that the performance in this project is at a level of approximately 60-80 points. **I am aware of the importance of PageSpeed and the crucial role smooth page performance plays in Google search rankings.** However, the main idea behind this project was to serve as a kind of showcase. I focused primarily on the visual aspect of this project, but as mentioned earlier, **I understand the crucial role performance plays in SEO positioning**. I would like to add that this was the project I spent the most time on in my history, but it also provided me with the most valuable knowledge to date. **I confidently say that in creating this project, I gained knowledge comparable to my entire career combined.**

Front-End Developer
2023-11 - 2023-11

INSIGHT.

INSIGHT marks my initial steps into the realm of **React, Vite, TypeScript** and **TailwindCSS**, reflecting my commitment to the highest programming standards. Impressive results in the Lighthouse report - 98% performance, 91% accessibility, 95% best practices, 100% SEO - attest to my dedication to crafting excellent user experiences.

https://leman300.github.io/INSIGHT/

Front-End Developer
2023-09 - 2023-09

Furniture Haven

This was my first attempt with Bootstrap, but the result turned out much more aesthetically pleasing than I had planned. The website was created using **Bootstrap, JavaScript** and **SCSS**. The site features a sophisticated design in muted shades of gray and black with a touch of fresh green.

https://leman300.github.io/FurnitureHaven/

Front-End Developer

2023-10 - 2023-10

SpeakGPT & FALL-E

A clone of ChatGPT and DALL-E, created as an engineering project, represents my skills in frontend programming, utilizing two key **API** technologies - SpeakGPT, whose functionality is currently disabled due to budget constraints, and operational FALL-E, enabling image generation. The application is built using **React, Vite, TailwindCSS, SCSS** and **TypeScript**.
